

# Weekly report

Week 7

## **What we plan to do:**

This week we plan to work more on the server and get it working. By “working” we mean that we want someone to be able to create a server, others join that server and then we can see each other in the game. We’re also receiving the peer review on our project this week so we will read through that and check what criticism and feedback we’ve got and apply it to our project.

## **Outcome**

We worked a lot on the server and other parts of the program. We got the server working as well. So someone could create a server, we could join it and also see each other in the game. The peer review of our project didn’t really give any major criticism or something that we need to prioritize fixing. So we just continued on at normal pace with the project. We did fix some things that the peer review commented on as well.
