

# Meeting protocol

## Meeting 11

### Discussion items

1. We talked about some of the changes we did during the weekend. There was some refactoring of powerups, adding a method for removing bodies from the world and talks about adding Observer Pattern to certain classes.
2. We had a short talk about the presentation of the project and how that will work.

### Outcome

1. We caught up with each other and our changes. Code is definitely better there were a lot of things added which are very much needed and well made.
2. We don't currently see the presentation as a pressing matter because it is not a long presentation and all we really need to do is fix a powerpoint for it.

Other than that we continued working as normal, we have not yet received the peer review on our project. The meeting was short with a decision to work more on the project on it later in the day, perhaps when we have gotten the review on our project.
