

Meeting protocol

Meeting 10

Discussion items

1. We talked about the peer review and if we should hand it in today when we're done or not considering we still had til the end of week to do it.
2. There was also some discussion about collisions and how to fix collisions between vehicle and powerups and also not make spaghetti code.

Outcome

1. We decided to wait with the hand-in until after our meeting with our supervisor as we want him to check it to see if everything looks fine.
2. Still working on it, some ideas with interfaces but problems still arise. Will continue to work on.

We also worked more on the project, checked the quality of some code and did some fixes and encapsulation.
