

Meeting protocol

Meeting 12

Discussion items

1. We decided to go through the peer review on our project and see what criticism and feedback we've received.
2. We talked about implementing more tests to our code and to make the existing tests "better".
3. We did some tests with the server as well.

Outcome

1. The feedback we received didn't really say anything that made us fix things. Just minor stuff here and there.
2. We went on to add more tests and change some of the current ones. Tests added were MissilePowerUpTest,
3. We made it work and can now play with each other!
